The Perfect Prompt Formula

Weak Prompt = Cheap Result

Strong Prompt = Based Result

Four Part Prompt Framework

Role - Context - Task - Format

Role : You are Fitness Coach Trainer

Context :

You have to train me in losing 20 kgs of body weight, in a healthy way over the course of 6 months, my height is 6 feet 2 inches, my weight is 100kgs.

Task : help me lose the weight/fat, i want to become fit.

Format : give me a journey/flashcards/pointers/bullet points as on how to do it.

Example of a worst prompt :

give me a plan to lose weight

You are a Senior Career Coach.

I am a final year CS student preparing for Internships.

Create a beginner friendly roadmap/career map for becoming a ML Engineer.

Format : The response as a step by step monthly plan.

By typing in an optimized/better/well-structured prompts you can save a plenty of tokens as well as cost.

If you are run outta tokens, you either need to wait for the next 5 hr chat session limit renewals or spend some bucks to buy some AI credits.

We can also give negative instructions :

Do not make it sound boring.

Do not make it read like AI Slop.

Do not make it sound like AI generated.

We can also add some positive instructions :

Add resources from xyz paper.

Add links from the X on abc topic.

Summary

- This module introduces the 4-part prompt framework.
- Role → Context → Task → Format, which helps create clear and effective AI prompts.
- It explains the difference between positive instructions (”what to do”) and negative instructions (”what not to do”), emphasizing that Claude performs better with clear positive guidance.

- A live walkthrough demonstrates how a weak prompt can be transformed into a stronger and more effective prompt step-by-step.
- The project task encourages learners to apply the framework by creating their first structured prompt using sentences and testing its effectiveness
